HOW IT WORKS · IN BRIEF

Safety data sheets and labels for every market you sell in. Signed off by a specialist.

Hazline writes, converts and checks your safety data sheets and labels for Canada, the US, the EU and the UK, and keeps them current. You follow everything in one simple online portal: what we need from you, what is coming up, and proof that it is done.

- WHMIS in English and French
- OSHA HazCom
- EU and GB CLP
- Fixed fee in writing

Three steps, then it runs

1 **Tell us what you sell** 20-MIN CALL

A short call, or one SDS for a free spot-check. We confirm which rules apply in each market and send a fixed-fee quote in writing within two business days.

2 **Classification first, then the SDS**

You approve a classification report before any SDS text is written. Then the master SDS and label text, then the country and language versions, each checked and signed off.

3 **Everything in your portal**

Your SDS library, every review and approval, and a reminder before each SDS is due for review.

HAZLINE DOES

Classifies each product for each market, writes and checks every SDS and label, tracks rule changes and keeps your library current.

YOU DO

Send your formula and supplier SDSs, answer our questions and approve the classification and the drafts. Your company stays the supplier of record.

WHAT YOU GET

Everything your safety data sheets need

New SDSs and labels

From your formula: the 16-section SDS and label text for each market, in English and French for Canada.

Your EU SDS, for Canada or the US

We redo what WHMIS or OSHA HazCom require, write the French version and check VOC limits and inventories.

SDS library

Every SDS on site, collected, checked and kept current in English and French, in an online library your workers open on any phone.

SDS audits

Your existing or supplier SDSs checked against the current rules, with findings ranked by risk.

Rule changes

A quarterly digest of what changed for your products, and an alert in between when something cannot wait.

Video courses

Self-paced courses on SDSs, labels, WHMIS and HazCom 2024, one price per company, with a certificate for each person who passes.

Regulatory trackers

How the GHS, cosmetics and packaging EPR rules apply market by market, compared side by side and reviewed by a specialist every quarter.

Start with one SDS

Send one safety data sheet for a free spot-check and a short written summary.

Kept current every year

An optional yearly maintenance plan confirms recipes and suppliers and updates what a rule change affects.

See it with your own products

Book a 20-minute call. We look at what you sell and where, and show you the portal on a live walkthrough.
